

Managed Inventory Service

MD Stetson's **Managed Inventory Service** is a free service provided to qualified customer partners that assures inventory control, cost control and chemical safety for your custodial operations. Here's how it works...

- Our technician will visit your facilities and audit each custodial stockroom on a scheduled basis to take inventory of all pertinent products.
- The inventory on hand is compared to the par levels set up at the onset of the program and a recommended order is drafted to align the inventory with the appropriate par levels.
- If there are irregularities, the technician will address them right away to avoid over or under stocking.

Stetson Managed Inventory Report

Date:

Both a hard copy and an electronic copy can be provided.

Guaranteed Safety X

In addition, our In-service Technician will make sure that chemical safety is being adhered to.

- The technician will assure that all products are in the proper, labelled secondary containers.
- If additional bottles or labels are needed, this will be added to the order suggestion.
- All chemical, paper and soap dispensers will be tested and will be scheduled for repair or replacement, if necessary.
- The technician will also check for SDS sheets to make sure the they are in the proper location and that they are up to date.
- In addition, direct access to our Technical Director (Chemist) is available any business day.
